

Introduction of Bandi**V**ita

Lunavit

Just feel good.

“

Did you know there is a vitamin bracelet that feeds your body with microcurrent vitamins?

”

BandiVita _ Vitamin Bracelet is the only product in the world that has been applied with the patent technology of GI Co., Ltd.

BandiVita _ Vitamin Bracelet is a new wearable product that replenishes the natural lack of bioelectricity.

It is a good product for office workers exhausted by fatigue and stress, for fatigued parents from parenting and house chores and for beloved couples' bracelets.

“

The Vitamin Bracelet
with microcurrent.
Proved by medical experts.

”

BandiVita is a product developed to supply microcurrent to the wearing area at any time, making sure that the microcurrent treatment methods don't come with side effects while eliminating pain by utilizing microcurrent (bioelectricity), which is unique to the human body as well as relieving pain. This is an electronic vitamin bracelet that is fed through the skin.

Unisex
[19mm]

For women
[13mm]

“

Microcurrent is an electronic vitamin.

”

If there is an abnormality in the tissues of the human body , the area has higher electrical resistance than the surrounding tissues, which prevents current from passing well.

Thus, less current flows and less absolute current in the cells, resulting in inflammation, pain, local fever, swelling, redness, etc. and eventually, the tissue will shrink to protect itself.

If muscles contract, blood flow decreases, oxygen and nutrients are reduced, and the waste in body accumulates.

At this time, when supplying the microcurrent from the outside, the current volume increases and the electrical resistance of the tissues is reduced, and it returns to its healthy cells by the sufficient oxygen and nutrients supplied.

In other words, microcurrents are electronic vitamins and electronic analgesics.

[Professor GilJeon,Kang of Chungnam National University Hospital]

“

What if microcurrent is supplied
to our body?

”

Increases ATP
by 500%

+

Increases cell
membrane
permeability by 40%

+

Promotes the
activity of
T-lymphocytes.

Promotes protein
synthesis.

+

Promotes
DNA synthesis.

Microcurrent Cell

Increase of 500% ATP ↑

ATP stands for **A**denosine **T**riphos**P**hate and is the basic energy substance that drives life's energy. ATP acts as common energy for all living organisms to survive, from humans to animals to plants, fungi to bacteria.

So ATP functions a number of important life phenomena , such as biological reactions that require energy, production of cellular components, muscle movements, signals of neurotransmission, etc..

“ Nobel Prize in Physiology or Medicine by microcurrent. ”

Since Dr. Bert Sakman and Dr. Erwin Neher won the Nobel Prize in Physiology or Medicine in 1991 for their study that the microcurrent flows into the human body and it plays an important role in cells activity, it has been used in many fields such as various treatment devices, devices and products.

Dr. Bert Sakman

Dr. Erwin Neher

“

Microcurrent in our lives,
closer than you think

”

Microcurrent is used in various fields such as pain medicine, personal treatment equipment, beauty equipment, tooth decay therapy, etc.. In many companies and laboratories, active studies are being conducted.

With the increased trend of various applications and business areas utilizing microcurrent, GI Co., Ltd. is a leader in the related fields.

“

No power, no charge, BandiVita microcurrent cell

What technology is used to manufacture it?

”

BandiVita extracts microcurrent through a special method from an ore that has an electric particle. We have eco-friendly cell manufacturing technology, and we have 5 domestic patents related to it.

By applying this technology to band products and wearing it, it acts as a supplement to microcurrent(bioelectricity) by flowing through microcurrent cells to the human body.

We can't get electricity from a natural tourmaline because the directions of the crystals which are electrified are random.

This is equivalent to that we can't get the electricity if pouring batteries into the basket and measuring them outside the basket.

But we can extract the electricity if rearranging the pure electric crystals with the same polarity in a line after grinding the tourmaline finely and filtering the impurities.

Tourmaline is a novel rock that reacts with ionic particles emitted from the sun and it emits a microcurrent of about $60\mu\text{A}$.

But we couldn't use the microcurrent due to impossible extraction into the outside because natural tourmaline has random directions of the electric particles.

If the microcurrent can be extracted from tourmaline to compensate for the lack of biocurrent, it will be beneficial to people's health by not only relieving pain, but also treating and preventing diseases. Unfortunately, there are so many products around the world that use conventional tourmaline. In fact, there is not a single product in which the current is measured.

However, we succeeded in extracting the current from tourmaline with new technology of GI Co.,Ltd. made in cell form applied to **BandiVita** and commercialized it.

“

BandiVita continues to evolve

”

The **BandiVita** design has long been considered to suit different occasions, places, fashion/trends, and whereas being comfortable to wear, minimizing inconvenience. We considered a design that allows the body to be supplied with electronic vitamins just by wearing it. **BandiVita** is a bracelet-style product with a fine current cell applied by GI's patented technology **BandiVita** manufacturing process is not Cast or Press, but a fine work to be manufactured by 100% handmade one by one with whole aluminum by CNC machines.

Approximately 50 to 500 μA is emitted semi-permanently without the need for charging or replacement.

It is equipped with a microcurrent cell and Shungite chips cell with magnetic field.

“

You can trust BandiVita

”

We have five patents in Korea with microcurrent-related

In addition, the measurement of microcurrent from the microcurrent cell of GI Co., Ltd., Korea Institute of Standards and Science. We received the test certificate and the Radiation Test Certificate of Radiation Dosage. KC certified by the Korean Institute of Clothing Testing and Confirmation of Supplier Conformity.

“

Why choose a **BandiVita** bracelet?

”

01

“ No charging is required because microcurrent comes out semi-permanently ”

Microcurrent is emitted semi-permanently without the need for charging or additional power connection by GI's patented technology to extract the current by rearranging tourmaline particles.

02

Wraps on your wrist - The winding is comfortable to wear and soft and light

The vitamin bracelet plate (cell housing) is made of non-toxic aluminum, and the band is made of nano silver coated silicone for antibacterial and deodorization, a great fit and a light weight of 16.9oz.

03

BandiVita - Vitamin Bracelet is an electronic vitamin that is fed through the skin

As mentioned earlier, the amount of current is increased by supplying microcurrent to the human body, the electrical resistance of the tissues that received the microcurrent is reduced, and oxygen and nutrients are supplied to healthy cells. In other words, microcurrent is an electronic vitamin and an electronic analgesic.

04

You can always charge yourself with electronic vitamins at a reasonable price

You can get your own **BandiVita** for fashion and health at a reasonable price!
GI Co., Ltd. acquired the world's first microcurrent cell manufacturing technology using natural minerals and commercialized it so that we can offer everyone the chance to leave a healthy life without pain.

“

Give a **BandiVita**,
the vitamin bracelet as a gift!

”

Give it to your loved ones, friends, colleagues, or to yourself,
what can be better than gifting a trendy healthy item?

It is time to charge yourself with electronic vitamin.

Thank You

for reading through.
